## SCORE OVER LENGTH SEARCHES

Attached is a score over length search. This search was developed to overcome limitations in most standard search systems which favor large sequences with high scoring, but lesser overall identity over smaller sequences with higher overall identity. This search is especially useful for relatively small nucleic acid or polypeptide target sequences (antisense, fragments, probes, primers, RNAi, epitopes, haptens, etc.) claimed functionally via a form of hybridization and/or identity language and having defined upper and lower polynucleotide and or polypeptide length limits.

The score over length search is performed by first running the query sequence using examiner-specified identity and polynucleotide or protein length limit parameters, and saving 65,000 hits and 0 alignments from each desired database. The resulting output is reformatted using a Microsoft Word macro and is imported into Excel. The summary table data are then sorted by the ratio of score of each hit sequence divided by its length and the accession numbers for all hits below the examiner's desired score over length parameters are deleted. The remaining accession numbers are used to pull the corresponding sequences from the databases into subdatabases enriched for good hits and the query sequence is re-run against these subdatabases to yield the final results.

The score over length cutoff for this search is  $\frac{70\%}{100\%}$ .

Examiner Please Note: This cover sheet should be included when submitting results to be scanned.

Sequence 100, Application US/09305856B

Patent No. 6479236

GENERAL INFORMATION:

APPLICANT: Penny, Laura

APPLICANT: Galvin, Margaret

TITLE OF INVENTION: Genotyping the Human

TITLE OF INVENTION: UDP-Glucuronosyltransferase 1 (UGT1) Gene

FILE REFERENCE: 4389-7 (formerly SEQ-17CIP)

CURRENT APPLICATION NUMBER: US/09/305,856B

CURRENT FILING DATE: 1999-05-05

PRIOR APPLICATION TOMBER: US/09/305,856B

PRIOR APPLICATION TOMBER: 60/084,807

PRIOR FILING DATE: 1998-05-07

NUMBER OF SEQ ID NOS: 124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    APPLICANT: Valiberg, Eugeni
APPLICANT: Adams, Cynthia
APPLICANT: Sabry, James

Patent No. 6559294
GENERAL INFORMATION:
APPLICANT: Griffals, R.
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments
TITLE OF INVENTION: chareof and uses thereof, in particular for the diagnosis, preve
TITLE OF INVENTION: and treatment of infection
TITLE OF INVENTION: and treatment of infection
TITLE OF INVENTION: and treatment of infection
CURRENT FILING DATE: 1998-11-24
NUMBER OF SEQ ID NOS: 6849
SEQ ID NO 6233
LENGTH: 20
TYPE: DNA
ORGANISM: Chlamydia pneumoniae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 33, App. No. 620741
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

PATENT NO. 6214806

GENERAL INFORMATION:
APPLICANT: Krieg, Arthur M.
APPLICANT: Krieg, Arthur M.
APPLICANT: Krieg, Arthur M.
APPLICANT: Schwartz, David A.
TITLE OF INVENTION: USE OF NUCLEIC ACIDS CONTAINING
TITLE OF INVENTION: LPS-ASSOCIATED DISORDERS
FILE REFERENCE: C1039/7011
CURRENT APPLICATION NUMBER: US/09/030,701B
CURRENT FILLING DATE: 1998-02-25
CURRENT FILLING DATE: 1998-02-25
APPLICANT: Davis, Heather L.
APPLICANT: Krieg, Arthur M.
APPLICANT: Krieg, Arthur M.
APPLICANT: Schorr, Joachim
APPLICANT: Wu, Tong
TITLE OF INVENTION: Vectors and Methods for Immunization or TITLE OF INVENTION: Therapeutic Protocols
TILE REFERENCE: C1039/7009
CURRENT APPLICATION NUMBER: US/09/082,649B
CURRENT FILING DATE: 1998-05-20
PRIOR APPLICATION NUMBER: US 60/047,233
PRIOR FILING DATE: 1997-05-20
PRIOR APPLICATION NUMBER: US 60/047,239
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ş
                                                                                                                                                                                                                                                                                                                                                         밁

Sequence 56, Application US/09031626

Patent No. 6228581

GENERAL INFORMATION:

APPLICANT: Acton, Susan L.

APPLICANT: Ordovas, Jose M.

TITLE OF INVENTION: DIAGNOSTIC ASSAYS AND KITS FOR BOD'

TITLE OF INVENTION: CARDIOVASCULAR DISORDERS

FILE REFERENCE: MIA-005.04

CURRENT APPLICATION NUMBER: US/09/031,626

CURRENT FILING DATE: 1998-02-27

EARLIER APPLICATION NUMBER: 08/890,979

EARLIER FILING DATE: 1997-07-10

NUMBER OF SEQ ID NOS: 121

SOFTMARE: PatentIn Ver. 2.0

SEQ ID NO 56

LENGTH: 20

TYPE: DNA
ORGANISM: Human
